

# Enhance digital forensics and incident response (DFIR) skills with Sherlocks.

ON DEDICATED LABS

## What are Sherlocks?

Sherlocks are hands-on defensive investigation labs that simulate real-world cybersecurity incidents, designed to increase the capability to prioritize and analyze logs.

MAPPED TO THE INDUSTRY FRAMEWORKS

## Why should I add Sherlocks to my Enterprise plan?

- Foster a collaborative Purple Team approach

Enhance collaboration within your organization with our D-logic Sherlocks. These labs provide a defensive perspective on classic HTB Machines for 360° workforce development experience.

\*D-logic Sherlocks are exclusive for Enterprise Platform clients

- **Access 90-150% more labs than individual plans**

Practice with a bigger pool of scenarios based on real-world business logic and incidents. Members of the organization can easily stay updated on the latest threats and vulnerabilities, with official write-ups available directly at release..

\*Labs marked with "E" are exclusive for Enterprise Platform clients

- **Test your infrastructure... Before others!**

Release speed is a great benefit for business clients. Sherlocks will be released first to Enterprise Platform, and with a faster ratio. This is wildly important when it comes down to CVE-based labs to avoid potential operational risk in an unpatched environment.

## Who is this for?

### Security Analysts

Sherlocks keep security professionals ahead of incidents. Apply the same attacks and discover potential vulnerabilities on your infrastructure.

### Team Managers

Foster a collaborative security upskilling culture and create an efficient Purple Team mindset within your organization.

### Technical Leaders

Reduce high-level operational impact from cyber incidents and align skills development with wider corporate goals.
